About Lumiverse app

Lumiverse app is a revolutionary interface, allowing for a real-time projection mapping via web-browser running in portable devices. It supports playback of static images, video and interactive HTML5 apps.

In order to work properly, both the projector and control device (smartphone, iPad, laptop) must be connected to the internet. LUMIBOX 1 can be connected to internet with RJ-45 LAN (DHCP) cable, Wi-Fi or with optional GSM/4G/LTE modem.

Let's start!

1. Make sure your LUMITRIX projector device is on-line and ready.
2. Open Chrome Browser and login to your account at **my.lumiverse.com**

user:
password:

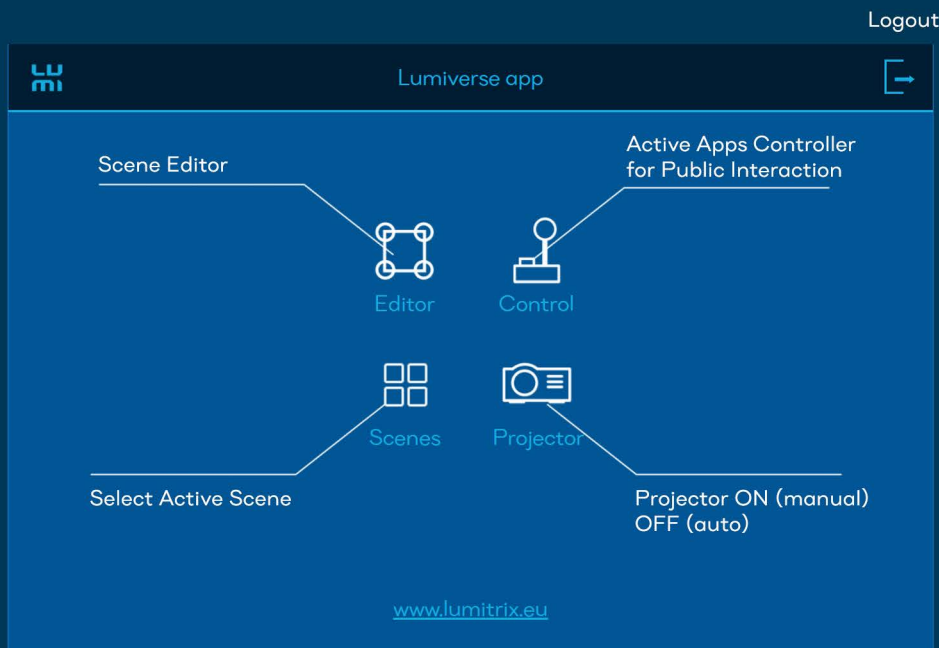

3. Enter your device address

http://my.lumiverse.com/.....

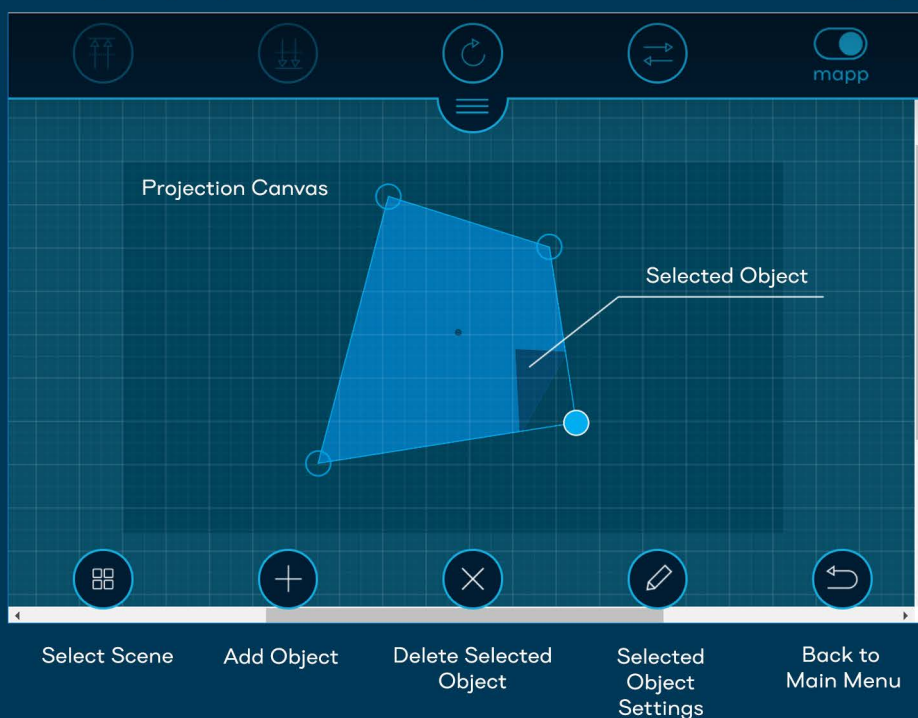

4. Select PROJECTOR and switch it ON. (This will set LUMITRIX device to manual mode and start the app)
5. Go back to main menu and select EDITOR
6. Use the '+' button to place apps and themes into your active scene.

Lumiverse app screens

NOTE: You can use SCHEDULER to play lumiverse scene automatically at a desired time. Just look for "lumiverse" when selecting source for the new scheduler task.

Upload custom video loops to Lumiverse

Fully automatic upload of custom files to the Lumiverse platform will be available with the July 2017 Upgrade.

Meanwhile, you can request custom video-loops upload by sending email to dip@lumitrix.eu

LUMITRIX operator David will process your request and upload data to your device.

Thank you!

Feel free to call Lukas +420 603 540 421 with any questions or feedback.
